

Power BI Project

Exercise Steps:

Below is an email you have received from your boss. You will have to go through the email and do the following:

- Requirement Gathering
- Create the data model
- Build the user interface
- Explore AI applications
- Create reports and dashboards

You will treat the trainers as your stakeholders. Ask them any questions you like and they'll provide you feedback on requirements and set expectations.

Email:

Subject: Request: Build Candidate Analytics Dashboard in Power BI

Hi,

We're kicking off an important initiative to improve visibility into our candidate pipeline, and I'd like your help building a dashboard in Power BI that will give us the analytics we need to make better operational and strategic decisions.

The goal is to create a centralized **Candidate Performance Dashboard** that highlights key insights from our recruitment and assessment process. Below is a breakdown of what I'd like the dashboard to include:

Dashboard Requirements

1. **Distribution of Candidate Removal Reasons**

We need a chart that shows why candidates are being removed from the pipeline. This should be a pie chart showing the breakdown of removal reasons by both count and percentage.

2. **Distribution of Candidates by Location (City)**

I'd like to see where our candidates are coming from at the city level. A horizontal bar chart showing the top 10 cities by candidate count would be ideal.

3. **Distribution of Candidates by State**

We also want to assess geographic coverage at the state level. A donut or grouped bar chart would work well to show the number of candidates per state.

4. **Passing Scores by Month**

This should track how many candidates are passing their assessments each month. Use the assessment date for grouping, and display this as a line chart showing trends over time.

5. **Failing Scores by Month**

Same as above, but for candidates who did not pass their assessments. It can be another line chart or a stacked column view if that works better visually.

6. **Interviews Scheduled by Month**

We want to track our interview pipeline. Please generate a bar chart showing the number of interviews that have been scheduled each month.

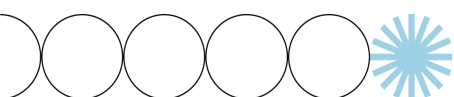

7. **Interviews Completed by Month**

Finally, we need a separate chart showing how many interviews were actually completed each month. Again, a bar chart is fine here.

Additional Requirements

Beyond the dashboard and reporting elements, there are several technical needs that will ensure the integrity of the application. Please address the following:

- Please check the data for inconsistency:
 - Scores to a valid range (0–100).
 - Require that Location fields are always filled in on the Candidate record.
- AI Applications and Data Storytelling

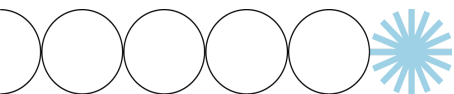

- Use AI-powered tools in Power BI (such as Smart Narrative, Key Influencers, or Anomaly Detection) to help uncover trends and generate plain-language summaries that tell the story of your data.
- Leverage AI insights to provide actionable recommendations for the business (for example, why certain removal reasons are trending, or what factors most influence candidate success).

Tips:

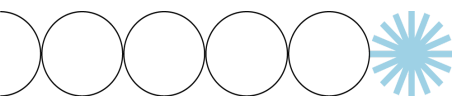

- Upload of data and data modeling is important here. Be sure to figure out the relationships.
- Pay close attention to the schema.
- Ask lots of questions. We'll let you know if we can answer them.
- You will NOT get responses right away. So ask early and continue to work through the issues or work on other areas of the capstone.
- Be creative. You're allowed to explore other features. After all, you want to provide value to the client and not just MEET the requirements. As long as you can explain the decisions you made and it's logical then we're ok to have it in.

Rubric:

Criteria	Score Range	Performance Level	Description
Requirement Gathering	0-3	Needs Improvement	Misinterpreted requirements, little evidence of research.
	4-7	Satisfactory	Understood the request, missed minor elements, asked some questions.
	8-10	Excellent	Fully understood all requirements, asked smart questions early, clarified expectations.

Data Model	0-5	Needs Improvement	Poor schema, wrong field types or missing relationships.
	6-10	Satisfactory	Mostly complete, but with naming inconsistencies or extra complexity.
	11-15	Excellent	Accurate schema reflecting real use cases; proper field types, lookups, and normalization.
Interface	0-3	Needs Improvement	Confusing layout, not functional.
	4-7	Satisfactory	Mostly usable, some navigation or UX issues.
	8-10	Excellent	Clean, functional, customized for user roles.
AI Applications and Data Storytelling	0-5	Needs Improvement	Story telling is missing.
	6-10	Satisfactory	Partially functional and not much of an explanation how AI is used.
	11-15	Excellent	Fully functional and helps provide context of how the data tells a story.
Security & Access	0-5	Needs Improvement	Missing or misconfigured security.
	6-10	Satisfactory	Partial implementation; Field-Level Security

			or roles not fully respected.
	11-15	Excellent	Thoughtful implementation, recruiters and hiring managers have correct access, data is protected.
Reports & Dashboards	0-7	Needs Improvement	Many charts missing, filters incorrect.
	8-14	Satisfactory	Most charts complete, minor formatting issues
	15-20	Excellent	All charts included, accurate data, appropriate chart types, labeled well
Presentation	0-5	Needs Improvement	Disorganized, hard to follow, unclear on what was done.
	6-10	Satisfactory	Clear but lacked depth or confidence.
	11-15	Excellent	Well-structured, explained rationale, answered stakeholder questions effectively.

Resources:

- [Capstone Data](#)

Deliverable:

- Give a presentation to the stakeholders of the work done. This will be a 30 minute meeting.

- 
- This presentation will be recorded and accessible to you. Submit the video link to Moodle to signify that the presentation was completed.
 - Submit the *.pbix file to Moodle with in this format: name_powerbi_capstone.pbix
